## Your Training Resource

### Experience Matters

ASAP has built a nationwide business by providing training instructors and designers who bring years of real world telecommunications experience to our clients' employees. And experience is what training is all about - job experience. Our nationwide staff of telecommunications professionals are schooled in both the Bell and GTE systems practices and procedures, with years of experience in training, project management, consulting, inside and outside plant operations, and engineering. And most, if not all, of our training professionals are certified and members of the ASTD.

### Curriculum Flexibility

Our staff of training professionals can deliver training using your curriculum or ours. Our team of professional designers have developed hundreds of courses that are field tested. We've designed and delivered training across the country to most of the major telecommunications providers as well as other industries, both large and small.

### Your Resource

Effective training for your workforce today means improved and expanded productivity tomorrow - and that translates directly into the bottom line for you and your business. A library of proven courses, customized course design, experienced instructors, a long track record - consider us your training resource. From traditional technologies, copper and coaxial, state of the art DSL and fiber optics to voice/data transmission, ASAP continues to exceed our clients' expectations by delivering and designing quality training - on time and within budget.

ASAP stands ready and willing to train your workforce - when you need it, where you need it.
